

- 0 Abstract**
- 1 Introduction**
- 2 Physics Motivation**
 - 2.1 The THIRD Neutrino*
 - 2.2 Neutrino Oscillations*
- 3 Physics Calculations**
 - 3.1 Production of Prompt Neutrinos*
 - 3.2 Weak Interactions and Neutrinos*
 - 3.3 Expected Rates*
 - 3.4 Background Predictions*
- 4 Prompt Neutrino Beam**
 - 4.1 Design Requirements*
 - 4.2 Concept*
 - 4.3 Engineering Designs*
 - 4.4 Performance*
- 5 Hybrid Emulsion Spectrometer**
 - 5.1 Methods of Detecting Tau Neutrino Interactions*
 - 5.2 Historical Background*
 - 5.3 Conceptual Design*
 - 5.4 Components*
- 6 Data Taking**
 - 6.1 Calibration with PW5 Muons*
 - 6.2 Neutrino Interaction Triggers*
- 7 Data Analysis**
 - 7.1 Emulsion Processing*
 - 7.2 Alignment and Calibration*
 - 7.3 Performance*
 - 7.4 Event Location (Spectrometer)*
 - 7.5 Event Location (Emulsion)*
 - 7.6 Event Analysis*
- 8 Monte Carlo Analysis**
 - 8.1 Neutrino Event Generator*
 - 8.2 Generated Distributions*
 - 8.3 Hybrid Emulsion Spectrometer Simulation (Geant)*
- 9 Physics Results**
 - 9.1 Composition of the Prompt Neutrino Beam*
 - 9.2 NuTau Interactions in Bulk Emulsion*
 - 9.3 NuTau Interactions in ECC Targets*
 - 9.4 Neutrino Production of Charm in Emulsion Targets*
 - 9.5 Determination of $\sigma_{\text{charm}}(x_{\beta}p_t)$*
 - 9.6 Measurement of the ν_{τ} magnetic moment*
